ADVANTAGES of E-LINE GRP

Engineers, designers, contractors, installers and end users have many reasons to choose E-LINE GRP/FRP cable tray for their power, signal and control distribution support requirements. E-LINE FRP pultrude cable ladder system is well adapted to extremely harsh chemical environments where high-corrosion resistance is required. Pultruded fiberglass Reinforced Polyester material as standard and exhibits below-mentioned performance characteristics.

Self-extinguishing

UV resistance

Halogen-free

No need to earth

Without toxic fumes

High Chemical Resistance. Chemically resistance for severely corrosive environments. Life-cycle cost is dramatically reduced by the extended life expectancy of this product.

High Weather Resistance. GRP is extremely resistant to low temperatures and exhibits well performance even in harsh climates.

High Mechanical Resistance. Pultruded profiles have been classified and approved NEMA 12°C and NEMA 20°C classification. Pultruded profiles can be supported up to 6M span, which reduce both the number of supports used.

Light-Weight. High strength-to-weight ratio as compared to metallic systems. Density is around. 1,75 gr/cm³ and 40% lighter than conventional metallic systems.

Low-Maintenance Cost. Continuous maintenance and cleaning are eliminated and cost effective-long term solution is provided.

High Dielectric Strength / Insulating. Low electrical conductivity properties and high dielectric strength. Conductivity can be increased upon request by enhancing anti-static properties.

Quick & Easy Installation. E-LINE GRP cable tray is strong and lightweight, allowing durable system to be installed quickly and easily.

Secure for Cables. There are no sharp edges or burrs, long runs of armored cable can be installed with less chance for cable damage. Cable bundles can be laid in the tray from either side.

WIDE RANGE of PRODUCTS

Heights are 100 mm and 150 mm; Widths are from 150 mm up to 900 mm, supplied lengths are 3 Meters and 6 Meters with pre-drilled holes on both edges as standard. Horizontal and vertical fittings can be delivered pre-assembled with radius options 250 mm, 300 mm and 600 mm with pre-drilled holes as standard.

- Available heights: 100 mm, 150 mm
- Available widths: 150 mm, 200 mm, 300 mm, 400 mm, 450 mm, 500 mm, 600 mm, 750 mm, 900 mm
- Rung spacing: 300 mm
- Straight Lengths: 3 Meters / 6 Meters
- Fitting radius: R300-R450-R600
- Covers
- Joint and fixing accessories

APPLICATION AREAS

- Wastewater treatment plant
- Power plants
- Mine industry
- Chemical plants
- Onshore/offshore installations
- Tunnels
- Farms and food production
- Solar and photovoltaic applications

REASONS to CHOOSE COMPOSITES:

1. Resistance to corrosion
2. Extremely light-weight
3. Excellent fire characteristics
4. Excellent load capacity
5. Insulating
6. Long-life span

EXTREME LOAD CAPACITY

- 149 kg/m at 3,6 m single span (NEMA 12C) for H100
- 149 kg/m at 6,0 m single span (NEMA 20C) for H150

WIDE RANGE of PRODUCTS

Standard Delivered Dimensions

- ↔ 150-200-3000-400-450-500-600-750-900 mm as standard
- ↑↓ 100 mm and 150 mm heights as standard
- 3M and 6M length as standard

REASONS to CHOOSE COMPOSITES:

- Under fire conditions
- Non-flammable material (Class I – ASTM E84)
- Self-extinguishing (UL 94 "V0" Classified)
- No toxic fumes
- Zero halogen
- Low flame spread index
- Low smoke densit

INSULATING

- Extremely insulating material (>7kV/m)
- No need to earth

MAINTANANCE FREE

- No corrosion
- No electrolytic corrosion
- No need for painting and protective varnishes

CODES & STANDARDS & CERTIFICATES (Con't)

EAE ELEKTRIK has carried out third party laboratory tests on all range of KCA GRP products. Details and results of the test is published and could be seen below. Please contact us for more support about test requirements.

UL 94 V-0 / (ASTM D-635) UL 94 V-0 / (ASTM D-635): Flammability Test

Standard for Tests for Flammability of Plastic Materials for Parts in Devices and Appliances:

That is a standard test method for measuring the rate of burning and duration of burning in plastic products. Our KCA GRP material self-extinguished within 10 seconds which means product achieved UL94 V-0 certification.

IEC 60695-2: Glow Wire Test

Glowing/hot-wire based test methods-Glow-wire flammability test method for end-products (GWEPT):

The sample is intended to simulate effects of thermal stress produced by an electrically heated source to represent a fire hazard. Our material achieved to resist a hot with 950 oC which is the highest possible value.

BS 476 Part-7: Surface Flammability

Standard Flammability Testing Equipment Surface Flame Spread Apparatus

This is a vertical flame spread test. Sample material is exposed to a high intensity flame for a predetermined amount of time. The heat source is then removed, and the test begins, after 10 minutes the flame spread, and rate is measured. Our resin system achieved the highest level possible.

ASTM E84: Surface Burning Characteristics

Standard Test Method for Surface Burning Characteristics of Building Materials:

Tests determine the rate of flame spread and smoke emission index of materials. The material is placed in a test box with a gas burner at one end and a smoke measurement device at the exhaust end. Our KCA GRP material achieved the highest level of certification in this test. Class-1.

ISO 4589-2: LIMITING OXYGEN INDEX

Determination of burning behavior by oxygen index:

specifies methods for determining the minimum volume fraction of oxygen, in admixture with nitrogen, that will support combustion of small vertical test specimens under specified test conditions. The results are defined as oxygen index (OI) values. Our KCA GRP system has achieved 23% (OI)

DIN 4102-1: Fire behavior of Building Elements

Fire behavior of building materials and elements Part 1: Classification of building materials requirements and testing

A test specimen is hung vertically in a test cabinet with a burner in it. It is subjected simultaneously to a flame for 10 minutes and a constant flow of air from below. The temperature of the smoke and the undamaged length of the specimen are measured.

IEC 60754-1: HALOGEN-FREE

Test on gases evolved during combustion of materials from cables - Part 1: Determination of the halogen acid gas content

Specifies the apparatus and procedure for the determination of the amount of halogen acid gas, The method specified in this standard is intended for the testing of individual components used in a cable construction. A simple test that ensures the material has zero halogen content. Halogens are a toxic group of elements that are sometimes used as flame retardants. All our products are halogen free.

ISO 527: TENSILE TEST

Tensile Strength and Elastic Modulus Testing:

The methods are used to investigate the tensile behavior of the test specimens and for determining the tensile strength, tensile modulus and other aspects of the tensile stress/strain relationship under the conditions defined. EAE KCA GRP Cable ladder has 325 MPa tensile strength.

CODES & STANDARDS & CERTIFICATES (Con't)

EAE ELEKTRIK has carried out third party laboratory tests on all range of KCA GRP products. Details and results of the test is published and could be seen below. Please contact us for more support about test requirements.

EN 60068-2-75: IMPACT TEST

Environmental testing - Part 2-75: Tests - Test Eh: Hammer tests

It is used to demonstrate an acceptable level of robustness when assessing the safety of a product and is primarily intended for the testing of electrotechnical items. EAE KCA GRP Cable ladder is classified 10J impact resistance.

ISO 4892-2: UV TEST

Plastics - Methods of exposure to laboratory light sources - Part 2: Xenon-arc lamps

ISO 4892-2:2013 specifies methods for exposing specimens to xenon-arc light in the presence of moisture to reproduce the weathering effects (temperature, humidity and/or wetting) that occur when materials are exposed in actual end-use environments to daylight or to daylight filtered through window glass.

NEMA FG-1: Single-Span Load Test

According to single-span, single-straight product load test, EAE KCA GRP Cable Ladder straight lengths are classified 12C and 20C.

IEC 61537: Multi-span Load Test

According to multi-span, spliced two straight product load tests, load capacity vs. span is drawn and could be seen on related straight length catalog pages.

IEC 60079-0 / (ASTM D-257): Surface resistivity (Anti-static property)

Explosive atmospheres - Part 0: Equipment - General requirements

specifies the general requirements for construction, testing and marking of Ex Equipment and Ex Components intended for use in explosive atmospheres. EAE KCA GRP Cable ladder is highly insulating material that has $>10^{12}$ ohm, which can be enhanced to $<10^8$ ohm with additional carbon filler.

IEC 60243-1/ (ASTM D-149): Dielectric Strength

Electrical strength of insulating materials – Test methods Part 1: Test at power frequencies

provides test methods for the determination of short-time electric strength of solid insulating materials. EAE KCA GRP Cable ladder has 7,2 kV/mm dielectric strength with 39 kV breaking voltage which is satisfied result.

IEC 60112: Proof Tracking Index

Method for the determination of the proof and the comparative tracking indices of solid insulating materials

provides test methods for the determination of short-time electric strength of solid insulating materials. EAE KCA GRP Cable ladder has 7,2 kV/mm dielectric strength with 39 kV breaking voltage which is satisfied result.

MATERIAL TECHNICAL DATASHEET (Glassfiber Reinforced Polyester Resin)

E-Line KCA GRP/GRP Fiberglass Cable Ladder systems are manufactured from glass fiber-reinforced plastic shapes that meet ASTM E-84 / UL 723, Class 1 Flame Rating and self-extinguishing requirements of ASTM D-635/ UL 94 V0. A surface veil is applied during pultrusion to insure a resin-rich surface and ultraviolet resistance.

The cable trays and accessories comply with the requirements of latest revision of following standards:

TECHNICAL DATA SHEET / POLYESTER RESIN / HALOGEN-FREE / RAL 7032

LW = Lengthwise
 CW = Crosswise
 PF = Perpendicular to Laminate Face

EFFECT of TEMPERATURE on Strength

Strength properties of reinforced plastics are reduced when continuously exposed to elevated temperatures. Working loads shall be reduced based on the following:

TEMPERATURE		Polyester Resin %of Strength	Vinyl Ester %of Strength
(°F)	(°C)		
75	24	100 %	100 %
100	38	90 %	100 %
125	52	78 %	100 %
150	65	68 %	90 %
175	79	60 %	90 %
200	94	52 %	70 %

*Freezing temperatures do not effect the load rating of cable ladders and the cable management system as the FRP material does not become fragile. Special consideration is required when service temperatures are over 200° Fahrenheit / 94° Celsius.

THERMAL EXPANSION & CONTRACTION

Strength properties of reinforced plastics are reduced when continuously exposed to elevated temperatures. Working loads shall be reduced based on the following:

Temperature Differential		Max. distance between expansion connector For 1 in. (25mm) expansion	
(°F)	(°C)	(feet)	meters
25	14	667	203
50	28	333	101
75	42	222	67
100	56	167	50
125	70	133	40
150	83	111	33
175	97	95	28

MECHANICAL LOADING SPECIFICATIONS

NEMA FG-1 is a U.S.A. / CANADA based testing standard of non-metallic cable ladders. Specification occurs with a combination of numeric and alphabetic scales. Single cable ladder is lay on two supports with a distance of L, then loaded until collapse (kg). The load is than divided to 1,5 safety factor and safe working load is noted as kg/m at tested support span.

Numeric refers to span distance in Imperial units;

- 8 ft. (2,4 meters)
- 10 ft. (3,0 meters)
- 12 ft. (3,6 meters)
- 16 ft. (4,8 meters)
- 20 ft. (6,0 meters)

Alphabetic scales refer to safe working load;

- A (75kg/m)
- B (111 kg/m)
- C (149 kg/m)

12C: Safe working load of 149 kg/m with 3,6 meters support span

20C: Safe working load of 149 kg/m with 6,0 meters support span

NEMA FG-1 SPAN/LOAD CLAS DESIGNATION - USA

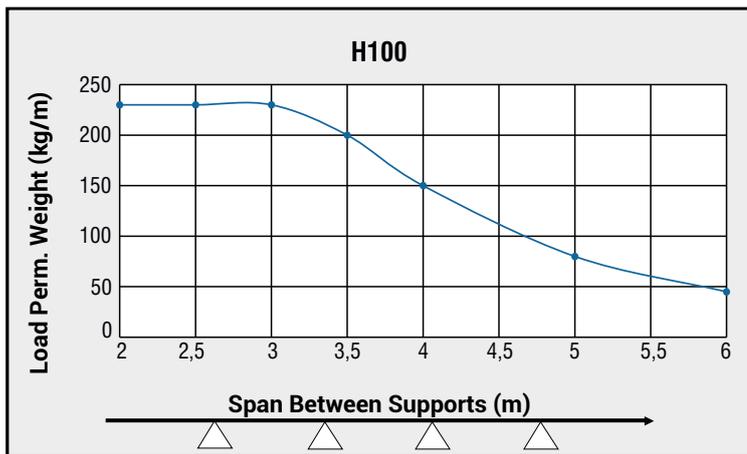

LOAD Kg/m (lb./ft.)	Support Span				
	2,4 m (8 ft.)	2,4 m (8 ft.)	3,6 m (12 ft.)	4,8 m (16 ft.)	6,0 m (20 ft.)
74 (50)	8A	10A	12A	16A	20A
112 (75)	8B	10B	12B	16B	20B
149 (100)	8C	10C	12C	16C	20C

IEC 61537 is an international testing standard of non-metallic cable trays ladders. Two runs of Cable ladder are joint and lay on at least three supports with a distance L and unsupported cantilever span 0,4L, then loaded until deflection limit L/100 reached. Loading is continued up to 1,7 safety factor. Then, the load capacity is noted as kg/m at tested support span.

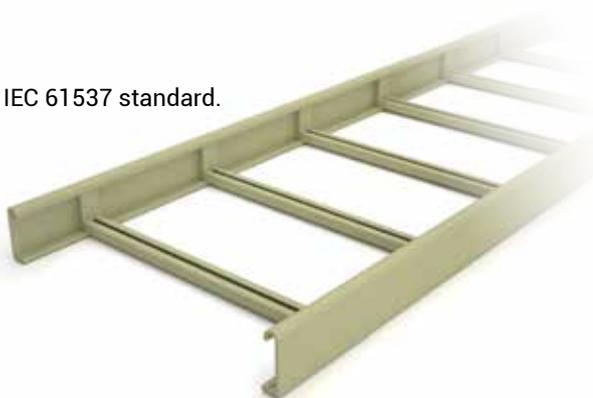

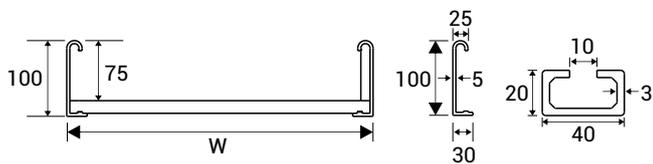

NEMA FG-1	IEC 61537
<ul style="list-style-type: none"> ·Uniformly Distributed Load ·Single-span configuration ·Loading Until Collapse ·x1,5 Safety Factor ·No Splice Plate Usage 	<ul style="list-style-type: none"> ·Uniformly Distributed Load ·Multi-span configuration ·Loading Until Deflection Limit (max. L/100) ·x1,7 Safety Factor ·Splice Plate is used

100 GRP NEMA 12C Series GLASS REINFORCED POLYESTER Cable Ladder

- Side Rail Height (H) : 100mm
- Widths (W) : 150mm, 200mm, 300mm, 400mm, 450mm, 500mm, 600mm, 750mm, 900mm
- Standard Rung Spacing : 300mm
- Standard Lengths (L) : 3 meter/6 meter

- Safe working load values are based on continuous beam test according to IEC 61537 standard.
- Please check Page-10 for effect of temperature on strength.

NON-METALLIC CABLE TRAY

PART1 – SCOPE

This specification covers the minimum requirements for design, manufacture, testing, and supply of Fiberglass Reinforced Plastic (KCA GRP) cable trays, necessary hardware, accessories and fittings etc. suitable for indoor/outdoor installations, required for cable laying.

- KCA GRP cable trays shall be designed and manufactured meeting the requirements of NEMA FG-1 and ASTM E-84.
- All cable trays and accessories shall be corrosion/ chemical resistant, weather resistant, easy to drill and cut, lightweight, high strength and flame retardant (Class 1 Rating) in accordance with ASTM E-84. All the composite materials shall have UV light inhibiting chemical additives to resist degradation from ultra violet light. All composite materials shall have Halogen-free properties.

DESIGN & DEFLECTION

- E-Line KCA GRP/GRP Fiberglass reinforced cable ladder sections are designed and manufactured to achieve the loading requirements of the NEMA VE-1 and IEC 61537, and are available in various load and span performances up to 6 meters span.
- All reported results are based on uniformly distributed static loads, single-span configuration for NEMA VE-1 load testing and multispans configuration for IEC 61537 load testing.
- 100 mm height KCA GRP ladders are NEMA 16C classified and 150 mm height KCA GRP ladders are NEMA 20C classified.
- All cable support deflections, within this catalogue, pertain to continuous cable support systems and do not take into consideration simply supported or end bay sections.
- It should be noted that the positioning of splice joints and loading techniques can significantly impact upon the actual deflection. Refer to NEMA VE2 installation guidelines for further information.
- Special consideration should always be given to live loads resulting from cable pulling to ensure this does not exceed the static cable support load limit.
- All load results detailed in this section have been derived from testing 900mm wide sections of KCA GRP/GRP cable ladders in the various configurations.

PART 2 - PRODUCTS

SPECIFICATIONS FOR EAE CABLE LADDER E-LINE KCA GRP/GRP Series Cable Ladder

1. Cable Ladder Design

- 1.1. Cable ladder shall be designed and manufactured by EAE ELEKTRİK A.S.
- 1.2. General: They shall be complete with installation and mounting accessories of KCA GRP such as bends, tees, crosses, reducers, splices, tray covers and other necessary hardware, fastener etc. defined in the latest NEMA FG-1 standard (U.S.A/Canada) and latest IEC 61537 standard (International standard).
- 1.3. Specially designed and manufactured cable ladder allows easy installation of cables which shall be free from burrs, projections, sharp edges inside where cables can be damaged.
- 1.4. Special designed Pultruded C-shape Side Rails, Pultruded C-shape Rungs, and Pultruded Splice Plates shall be increased the strength of the cable ladder and allow support spacings up to 6 meters.

2. Manufacture and Dimensions.

- 2.1. Ladder Cable Trays shall consist of two longitudinal members (side rails) with transverse members (rungs) via using clip-in composite item to the side rails.
- 2.2. General. KCA GRP/GRP cable ladders are manufactured in metric SI units.
- 2.3. Length. Straight lengths shall be manufactured in 3-meters and 6-meters.
- 2.4. Height. (Side Rail) Overall heights shall be 100mm, and 150mm (loading depths, shall be 75mm, and 125mm, respectively)
- 2.5. Width. Overall widths shall be 150mm, 200mm, 300mm, 400mm, 450mm, 500mm, 600mm, 750mm and 900mm.
- 2.6. Rung spacing. 300mm as standard. Other rungs spacing are possible upon request; 150mm, 200mm, 225 mm, 250 mm. Special clip-in item rung to side rail with GRP/KCA GRP lock part.
- 2.7. Fittings. Various types of fittings are available for supporting horizontal and vertical directional cable route/size changes:
 - Horizontal fittings: elbows, tee, cross, middle-left-right reducers
 - Vertical fittings: inside vertical elbow, outside vertical elbow, angle adjustable elbow
 - Standard Radius: R250, R300 and R600 (250, 300 and 600mm, respectively)
 - Standard angle for horizontal and vertical elbows: 900 (Other angles are possible upon request).

3. Material Properties and Finish.

Straight section structural elements; side rails, rungs and splice plates shall be pultruded from glass fiber reinforced polyester resin as standard and, vinyl ester resin upon request.

3.1. Flame Retardant and Non-Toxic Properties.

The material of construction for Cable Trays, Cable Ladders and Fittings must possess self-extinguishing properties to meet the requirements of ASTM D635 & UL 94.

- The Cable Trays, Cable Ladders and Fittings material characteristics must comply with Class 1 flame rating when it is fire tested against BS 476 Part 7.
- The Cable Trays, Cable Ladders and Fittings must possess a flame-spread index of 25 or less when it is tested in accordance with ASTM E84 Standard.
- Cable Trays / Ladders and Fittings shall have an oxygen index of 28 or greater. The testing requirements of oxygen index shall be in accordance with ISO 4589-2.
- For indoor, accommodation modules and air-conditioned area, the complete Cable Trays / Ladders, Fittings and its constituents shall be low smoke zero halogen type in accordance with ISO 5659-2 and IEC 60754-2.

3.2. UV Resistance Properties

The Cable Trays, Cable Ladders and accessories shall be UV resistant and shall meet requirements of ISO 4582 & ISO 4892. An UV inhibitor shall be included in the resin systems to minimize UV degradation.

3.3. Chemical and Water Resistance Properties

- Cable Trays, Cable Ladders and Fittings shall be resistant to a wide range of organic, inorganic substances, Saliferous and H₂S atmosphere.
- All selected materials for construction shall provide enhanced chemical resistance under the minimum, normal and maximum conditions of temperature and corrosive environment.
- Cable Trays / Ladders and its constituent materials shall not exceed 0.7% of weight increase when subjected to water absorption test for twenty four (24) hours in accordance with ASTM D570.

3.4. Anti-Static Properties

- The resin system shall contain a graphite filler or carbon fiber interwoven matting to prevent the accumulation of static electricity. The selection of the material shall be such that surface resistance shall not exceed 10⁹ Ω in accordance with IEC 60079-0, Section 7.4.

3.5. Surface Quality

- All profiles shall be free from surface defects, which may reduce the standard mechanical properties or reduce the operational life of the material.

3.6. Color

- Pultruded shapes shall have RAL 7032 (Pebble grey) as standard. Other colors are possible upon request.

4. Covers

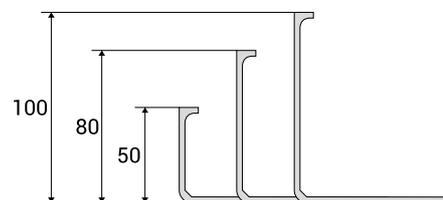

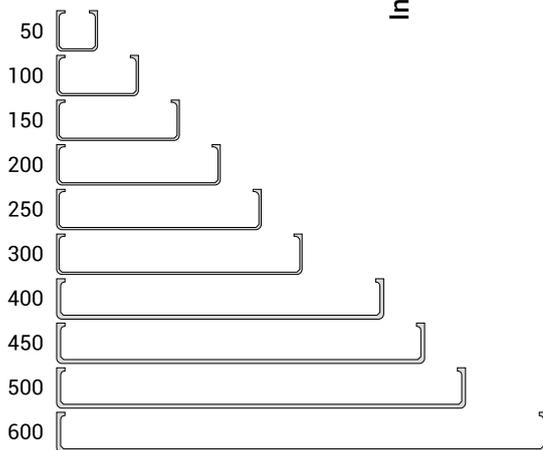

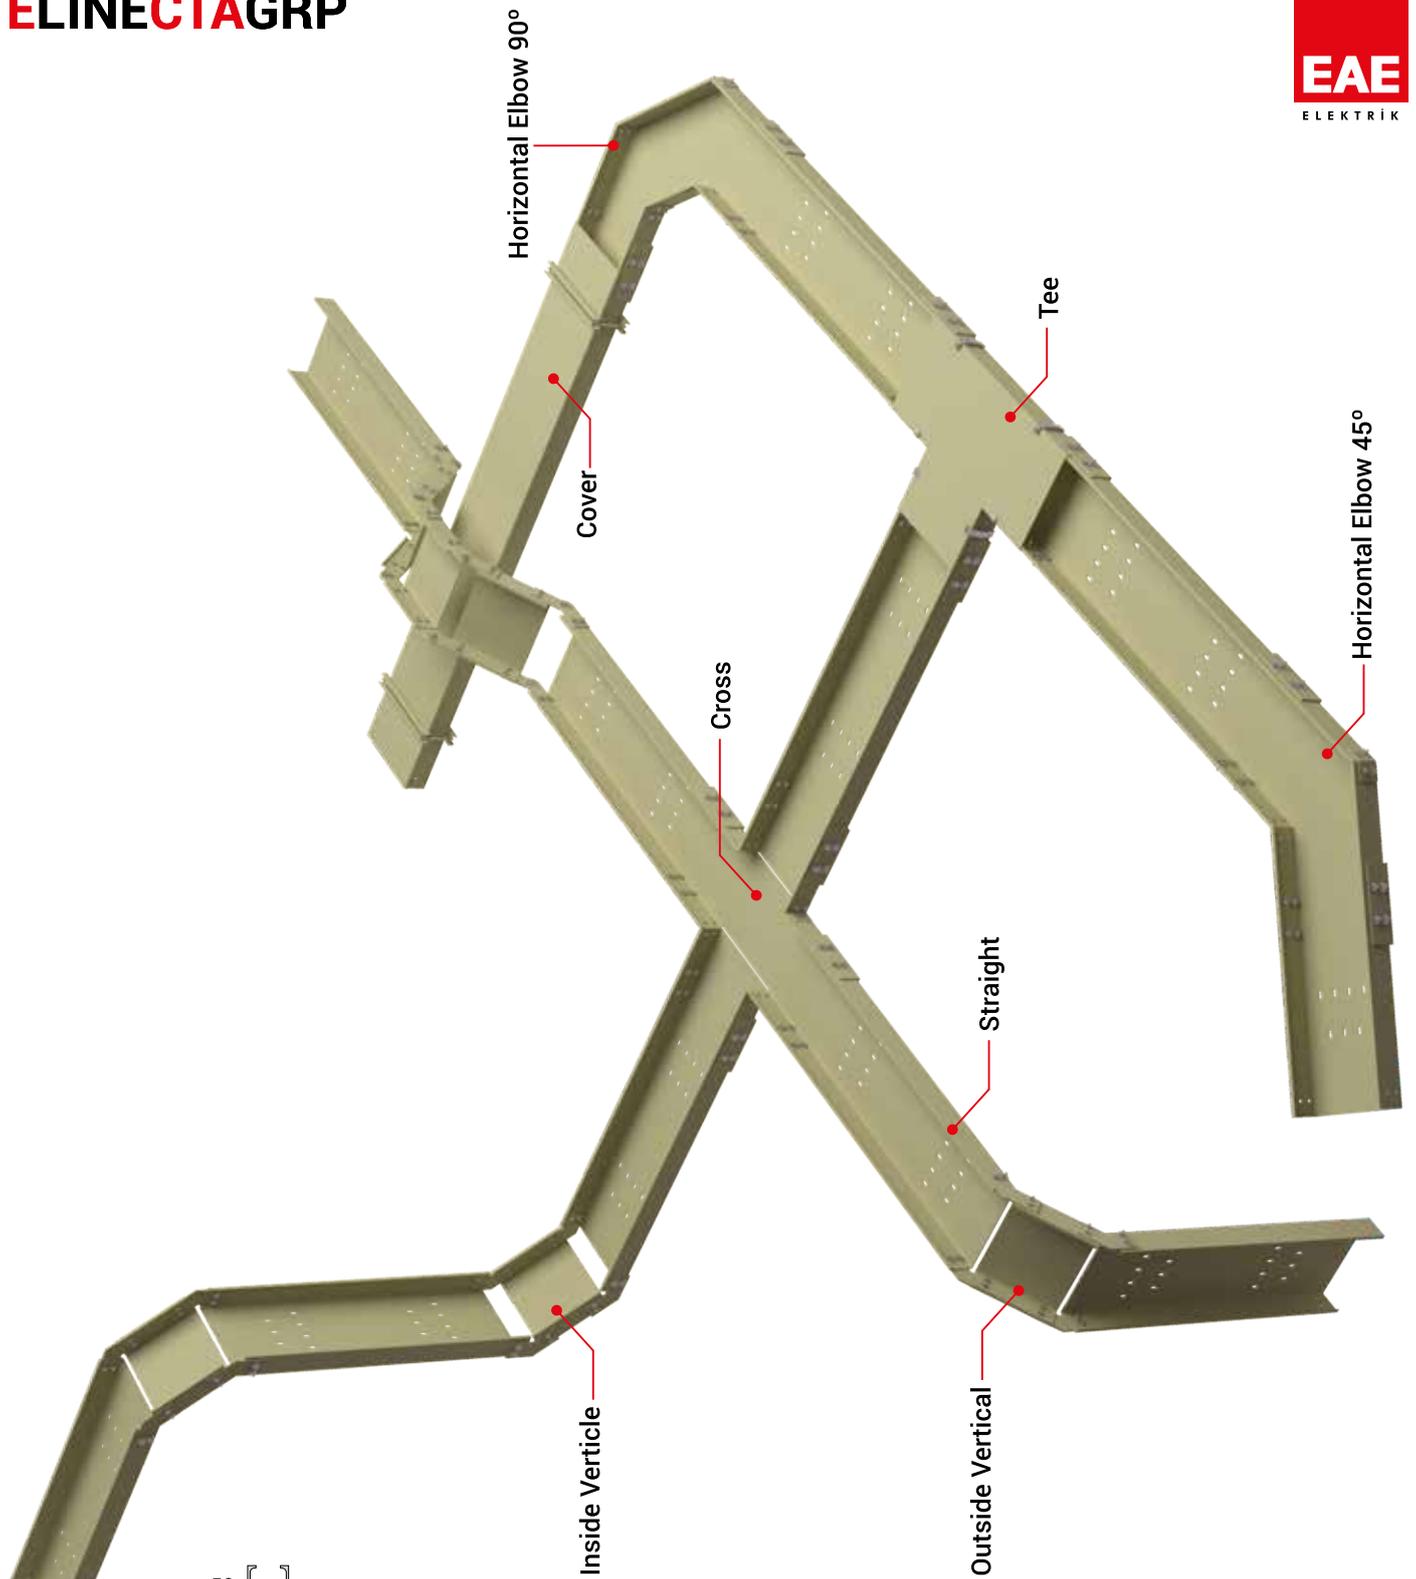

- 4.1. Covers shall be constructed KCA GRP/GRP Composite with a minimum thickness 3mm.
- 4.2. Covers shall be supplied to protect tray cables where needed.
- 4.3. All range of manufactured straight lengths and fittings shall be supplied with their covers upon request.
- 4.4. Perforated and non-perforated type flat and slope covers can be manufactured.
- 4.5. Heavy duty omega type cover clamps shall be used for outdoor applications.

5. Accessories.

- 5.1. Accessories shall be furnished as required to protect, support and install the cable ladder system.
- 5.2. Splice plates, expansion splice plates, horizontal and vertical adjustable couplers, vertical adjustable fitting, dividers, junction box plates as well as fixing fasteners are standard manufactured and supplied accessories by EAE.

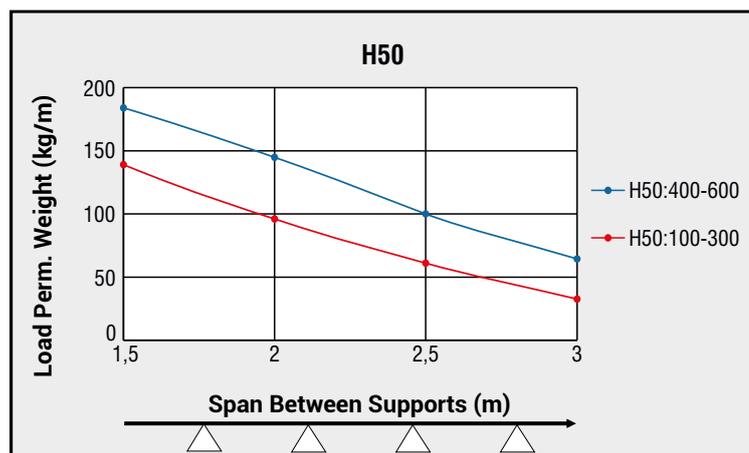

6. Splice plates.

- 6.1. Splice plates shall be fastened to the outside of the cable ladder side-rails.
- 6.2. Bolts, nuts and washers shall be supplied with splice plates. Stainless Steel 316 as standard. Composite fasteners are optional upon request.
- 6.3. Straight and expansion splice plates will be of "L" shaped lay-in design with a four-bolt or eight-bolt pattern.

50 CTA GRP FIBERGLASS REINFORCED POLYESTER Cable Tray

- Side Rail Height (H) : 50mm
- Widths (W) : 50mm, 100mm, 150mm, 200mm, 250mm, 300mm, 400mm, 450mm, 500mm, 600mm
- Standard Rung Spacing : 300mm
- Standard Lengths (L) : 3 meter

• Perforated

• Non-Perforated

- Safe working load values are based on continuous beam test according to IEC 61537 standard.
- Please check Page-10 for effect of temperature on strength.

- **Material** : Glass Reinforced Polyester (GRP) (Halogen-free, UV-resistant and UL94-V0) as standard.
- **Color** : Light beige (Pebble Grey, RAL7032) (Please, contact for other color options)
- **Connectors** : GRP as standard. (Stainless steel 316 grade, upon request. Page-64-65)
- **Fasteners** : 4 sets M8x25 SS316 (Page-69)
- **Covers** : Available upon request (Page-57)

100 CTA GRP FIBERGLASS REINFORCED POLYESTER Cable Tray

- Side Rail Height (H) : 100mm
- Widths (W) : 100mm, 150mm, 200mm, 250mm, 300mm, 400mm, 450mm, 500mm, 600mm
- Standard Rung Spacing : 300mm
- Standard Lengths (L) : 3 meter

• Perforated

• Non-Perforated

- Safe working load values are based on continuous beam test according to IEC 61537 standard.
- Please check Page-10 for effect of temperature on strength.

Quantity of Standard Cover Clamps Required

	Standard Cover Clamp	Heavy Duty Cover Clamp
Straight Sections (3M)	6 pcs	3 pcs
Horizontal/Vertical Bends	4 pcs	2 pcs
Tees	6 pcs	3 pcs
Crosses	8 pcs	4 pcs

- **Material** : Glass Reinforced Polyester (GRP) (Halogen-free, UV-resistant and UL94-V0) as standard.
- **Color** : Light beige (Pebble Grey, RAL7032) (Please, contact for other color options)
- **Cover Clamp** : (Page-67-68)
- **Material Thickness** : t=3mm
- **Delivered Length** : L=3m

YT Horizontal Tee Cover

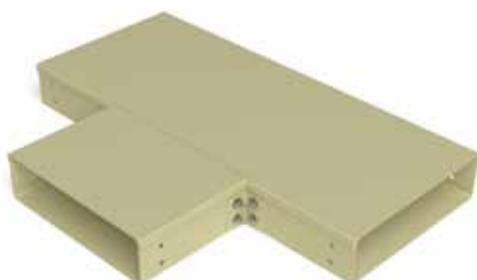

Delivered assembled

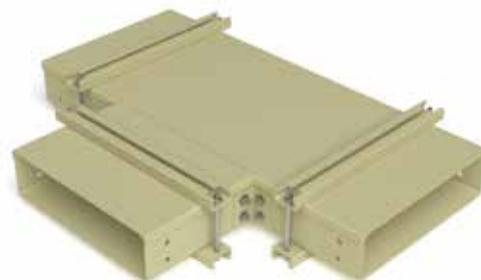

Description	Height (mm)	Width (mm)	Thickness (mm)	Order Code	Weight (kg/pcs)

- **Material** : Profiles: GRP (2 pcs)
 - Threaded rod: M8, SS316 (2 pcs)
- **Order Detail** : Nut: M8, SS316 (4 pcs)
 - 1 set should be ordered per each 1meter length.

PE

Polyester Resin
(ex: seaside, offshore platforms)
Most commonly used resin system. It offers good chemical resistance and weathering properties

- Environment: Strong atmospheric type corrosion (ex: seaside)
- Advantages: Optimal cost, good behaviour to fire
- Our recommendation: Self-extinguishing polyester, 0% halogen

PE-A

Polyester Anti-static Resin
(ex: mine, gas groups I)
Anti-static property is given to Polyester resin by adding carbon-powder, which increases the conductivity of the material where grounding is required.

- Environment: Highly exploding atmospheres
- Advantages: Anti-static properties
- Our recommendation: 0% halogen

AC

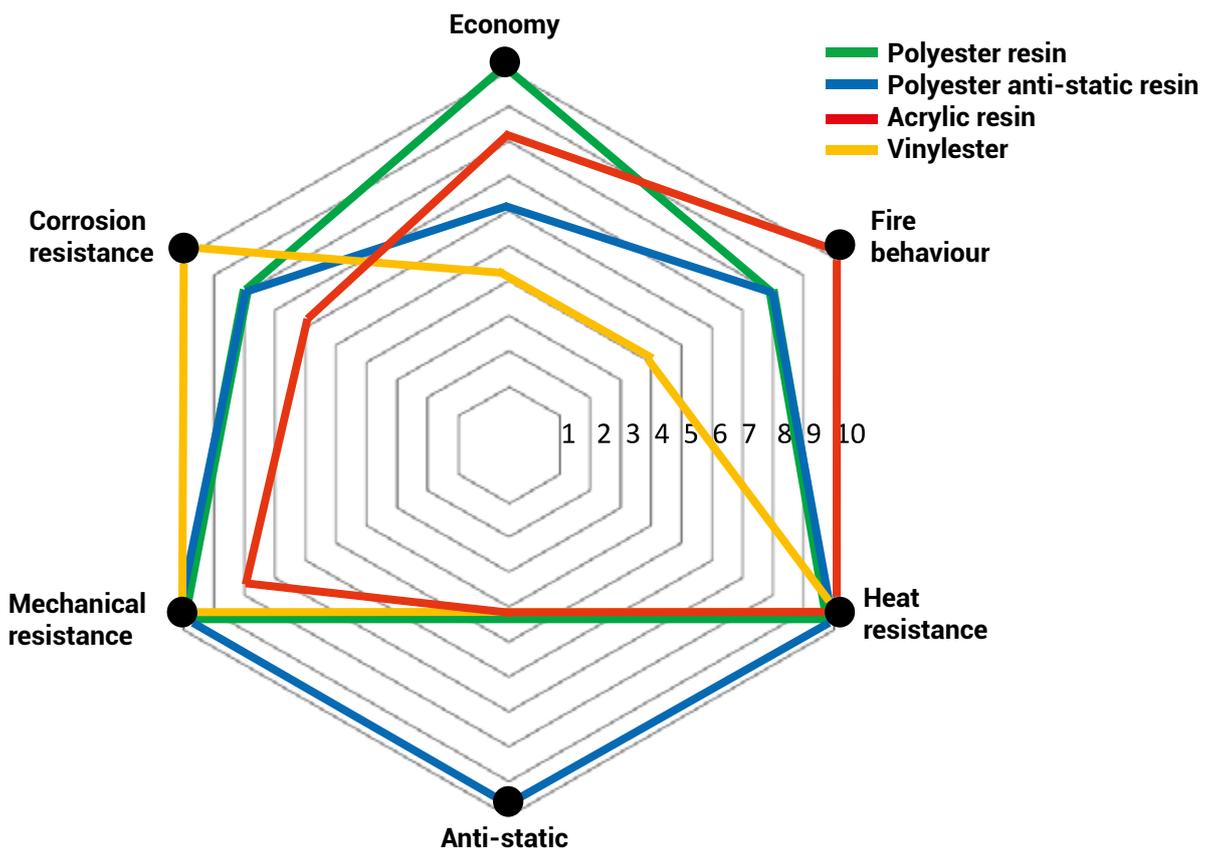

Acrylic Resin
(ex: tunnel)
It is ideal to use in enclosed areas, mass transit and tunnels. This resin has low smoke and toxicity properties while maintains good fire properties.

- Environment: Risk of fire in enclosed and corrosive environment (ex: seaside)
- Advantages: Excellent resistance to fire with max. security
- Our recommendation: Self-extinguishing acrylic, 0% halogen

VE

Vinyl Resin
(ex: H2SO4, HCl, corrosive chemical agents)
It offers resistance to aggressive chemicals such as H2SO4, HCl etc.

- Environment: Heavy chemical and caustic materials
- Advantages: High chemical corrosion resistance and heat resistance
- Our recommendation: 0% halogen

Resin Types

CTA GRP

NON-METALLIC CABLE TRAY

PART1 – SCOPE

This specification covers the minimum requirements for design, manufacture, testing, and supply of Fiberglass Reinforced Plastic (CTA GRP) cable trays, necessary hardware, accessories and fittings etc. suitable for indoor/outdoor installations, required for cable laying.

- CTA GRP cable trays shall be designed and manufactured meeting the requirements of NEMA FG-1 and ASTM E-84.
- All cable trays and accessories shall be corrosion/ chemical resistant, weather resistant, easy to drill and cut, lightweight, high strength and flame retardant (Class 1 Rating) in accordance with ASTM E-84. All the composite materials shall have UV light inhibiting chemical additives to resist degradation from ultra violet light. All composite materials shall have Halogen-free properties.

DESIGN & DEFLECTION

- E-Line CTA GRP Fiberglass reinforced cable tray sections are designed and manufactured to achieve the loading requirements of the IEC 61537, and are available in various load and span performances up to 3 meters span.
- All reported results are based on uniformly distributed static loads, multi-span configuration for IEC 61537 load testing.
- All cable support deflections, within this catalogue, pertain to continuous cable support systems and do not take into consideration simply supported or end bay sections.
- It should be noted that the positioning of splice joints and loading techniques can significantly impact upon the actual deflection. Refer to NEMA VE2 installation guidelines for further information.
- Special consideration should always be given to live loads resulting from cable pulling to ensure this does not exceed the static cable support load limit.
- All load results detailed in this section have been derived from testing 600mm wide sections of CTA GRP/GRP cable ladders in the various configurations.

PART 2 - PRODUCTS

SPECIFICATIONS FOR EAE CABLE TRAY E-LINE CTA GRP Series Cable Tray

1. Cable Tray Design

- 1.1. Cable tray shall be designed and manufactured by EAE ELEKTRİK A.S.
- 1.2. General: They shall be complete with installation and mounting accessories of CTA GRP such as bends, tees, crosses, reducers, splices, tray covers and other necessary hardware, fastener etc. defined in the latest IEC 61537 standard (International standard). Specially designed and manufactured cable tray allows easy installation of cables which shall be free from burrs, projections,
- 1.3. sharp edges inside where cables can be damaged.

2. Manufacture and Dimensions

- 2.1. General. CTA GRP cable trays are manufactured in metric SI units.
- 2.2. Length. Straight lengths shall be manufactured in 3-meters.
- 2.3. Height. Overall heights shall be 50mm, 80mm, and 100mm.
- 2.4. Width. Overall widths shall be 150mm, 200mm, 250mm, 300mm, 400mm, 450mm, 500mm and 600mm.
- 2.5. Thickness. Thickness shall be 3 mm for 50-300mm widths and 4,5mm for 400-600mm widths.
- 2.6. Fittings. Various types of fittings are available for supporting horizontal and vertical directional cable route/size changes:
 - Horizontal fittings: elbows, tee, cross, middle-left-right reducers
 - Vertical fittings: inside vertical elbow, outside vertical elbow, angle adjustable elbow
 - Standard Radius: R300, R450 and R600 (300, 450 and 600mm, respectively)
 - Standard angle for horizontal and vertical elbows: 450 - 900 (Other angles are possible upon request.

3. Material Properties and Finish.

Straight section structural elements; trays straight lengths and splice plates shall be pultruded from glass fiber reinforced polyester resin as standard and, vinyl ester resin upon request.

3.1. Flame Retardant and Non-Toxic Properties

- The material of construction for Cable Trays, Cable Ladders and Fittings must possess self-extinguishing properties to meet the requirements of ASTM D635 & UL 94.
- The Cable Trays, Cable Ladders and Fittings material characteristics must comply with Class 1 flame rating when it is fire tested against BS 476 Part 7.
- The Cable Trays, Cable Ladders and Fittings must possess a flame-spread index of 25 or less when it is tested in accordance with ASTM E84 Standard.
- Cable Trays / Ladders and Fittings shall have an oxygen index of 28 or greater. The testing requirements of oxygen index shall be in accordance with ISO 4589-2.
- For indoor, accommodation modules and air-conditioned area, the complete Cable Trays / Ladders, Fittings and its constituents shall be low smoke zero halogen type in accordance with ISO 5659-2 and IEC 60754-2.

3.2. UV Resistance Properties

The Cable Trays, Cable Ladders and accessories shall be UV resistant and shall meet requirements of ISO 4582 & ISO 4892. An UV inhibitor shall be included in the resin systems to minimize UV degradation.

3.3. Chemical and Water Resistance Properties

- Cable Trays, Cable Ladders and Fittings shall be resistant to a wide range of organic, inorganic substances, Saliferous and H₂S atmosphere.
- All selected materials for construction shall provide enhanced chemical resistance under the minimum, normal and maximum conditions of temperature and corrosive environment.
- Cable Trays / Ladders and its constituent materials shall not exceed 0.7% of weight increase when subjected to water absorption test for twenty four (24) hours in accordance with ASTM D570.

3.4. Anti-Static Properties

- The resin system shall contain a graphite filler or carbon fiber interwoven matting to prevent the accumulation of static electricity. The selection of the material shall be such that surface resistance shall not exceed 10⁹ Ω in accordance with IEC 60079-0, Section 7.4.

3.5. Surface Quality

- All profiles shall be free from surface defects, which may reduce the standard mechanical properties or reduce the operational life of the material.

3.6. Color

- Pultruded shapes shall have RAL 7032 (Pebble grey, light beige) as standard. Other colors are possible upon request.

4. Covers

- 4.1. Covers shall be constructed KCA GRP/GRP Composite with a minimum thickness 3mm.
- 4.2. Covers shall be supplied to protect tray cables where needed.
- 4.3. All range of manufactured straight lengths and fittings shall be supplied with their covers upon request.
- 4.4. Perforated and non-perforated type flat and slope covers can be manufactured.
- 4.5. Heavy duty omega type cover clamps shall be used for outdoor applications.

5. Accessories

- 5.1. Accessories shall be furnished as required to protect, support and install the cable ladder system.
- 5.2. Splice plates, expansion splice plates, horizontal and vertical adjustable couplers, vertical adjustable fitting, dividers, junction box plates as well as fixing fasteners are standard manufactured and supplied accessories by EAE.

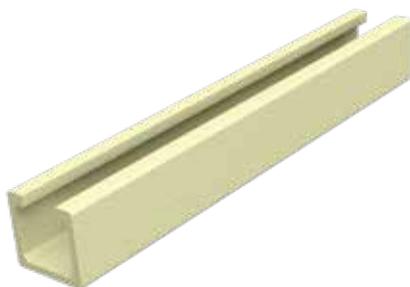

6. Splice plates

- 6.1 Splice plates shall be fastened to the outside of the cable ladder side-rails.
- 6.2 Bolts, nuts and washers shall be supplied with splice plates. Stainless Steel 316 as standard.
- 6.3 Straight and expansion splice plates will be of "L" shaped lay-in design with a four-bolt or eight-bolt pattern.
